

Joint Working EXECUTIVE SUMMARY

Published on www.astrazeneca.co.uk

Joint Working between AstraZeneca UK Ltd and Wallsend PCN

Document Number 244-1-ES

Date of Preparation Jan 2025

Project title	EffiKacy - Efficient Group Consultations for Chronic Kidney Disease (CKD) Patients
Aims and Objectives	The project aims to implement Guideline Directed Medical Therapy (GDMT) for > 700 Diabetic Kidney Disease and Kidney Disease Patients through a blend of virtual clinics and group sessions.
Anticipated benefits	The Renal Service Transformation Programme (RSTP) has highlighted the unmet need and lost opportunity of detecting CKD early and the importance of implementing NICE disease area guidelines (NG203, NG28) in eligible patients to prevent progression to End Stage Kidney Disease. The project aims to implement GDMT to patients within group sessions and virtual consultations to support efficient and convenient care delivery and through creating a patient support network through group sessions with other patients with shared diagnosis. The NHS will benefit through efficient optimisation of patients with kidney disease onto GDMT in a short time frame which will clear a proportion of Long Term Conditions workload too.
Timeline	The project will commence on the 17 Feb 2025 and until 15/08/25
